

Safer Covers Built to Last

Only One of These Aircraft Covers is Safe Enough to Clean Your Sun Glasses

Soft Fuzzy Cover Lining

- Generates static electricity
- Fuzz collects fine sand & dust
- Fuzz hides the sand & dust
- Sand scratches aircraft windows

Kennon's Anti-Grit™ Aircraft Cover

- Discharges static
- Doesn't collect fine sand or dust
- Doesn't hide fine sand or dust
- Safer to use against aircraft windows

Aircraft windows are charged with static electricity each time they are cleaned and covered. This static charge attracts sand and dust. Trapped sand and dust scratches the acrylic. A scratched windshield distracts the pilots and removing the scratches or replacing the windows is time consuming and costly

Kennon's new Anti-Grit™ Aircraft Cover discharges static electricity from the acrylic. Anti-Grit™ is so smooth and slippery that you can use it to clean your sun glasses.

A special static dissipating fiber is woven into the fabric. The fiber neutralizes static on the windows and the cover itself. The result is less trapped fine sand and dust, less scratching, fewer pilot distractions, and a savings of time and expense in window maintenance.

Kennon Aircraft Covers - Safer Covers Built to Last.
